Fabrication Process:

The Brandt Beef Meaty Back Rib Straight Cut is a bone-in rib portion prepared from Brandt Beef Natural USDA Choice graded beef ribs. The cut is approximate to the NAMP/IMPS code 124 Beef Rib, Back Ribs.

This item is produced from the ribeye section after removal of the (rib) short ribs and consists of the 6th through 12th ribs. This item is removed from the ribeye via knife cut between the thin fat layer and the rib primal belly surface, straight across the top section of the back rib so as to leave all lean meat (from fingers) attached to the back rib section. Some amount of tissue and lean on the internal side of the back rib shall be left intact on the item. Any fat along the rib cage section will be trimmed flush with the bone on the top portion of the back rib. No notching of the intercostal meat is performed on this product.
